SUBJECT: MRA – 37900 Mound Rd.– Structural Engineering Service
Tandem Proposal No. OU-260606.00

Greetings Mr. Miller,

Tandem Engineering Group (TEG) is pleased to submit our proposal for the provision of structural engineering services related to the structural condition assessment of the existing industrial building located at 37900 Mound Road, Sterling Heights, Michigan, as outlined in the information and supporting documents provided by the Client on September 3rd, 2026. The building consists of approximately 53,704 sq. ft. of industrial/shop and office space.

The scope of work includes the following:

I. SCOPE OF WORK

Based on the documents and details provided, our scope of work includes:

- Review the available existing building information, property drawings, survey, and other relevant documentation provided by the Client.
- Conduct up to three (3) full days site visit to perform a visual, non-destructive structural inspection of the existing industrial building.
- Perform a visual non-destructive inspection of the structural conditions, including the roof framing, structural steel beams and columns, bracing, exterior/interior structural walls, and accessible, and other primary structural components. We assumed most of the building has exposed structure except the office area.
- Visually review the existing overhead crane runway beams, supporting columns, connections, and associated building structural components, where accessible. Testing for commissioning may be needed to reinstate the usage. The service to be performed by a third party.
- Prepare a Structural Assessment Report including assessment findings, structural considerations, identified constraints, and recommendations.

Clarifications/Assumptions:

- The assessment will be based on a visual and non-destructive inspection only. Destructive investigation, material testing, exploratory openings, or removal of finishes/cladding is not included within the scope of work.
- The inspection will be limited to structural components that are readily visible and safely accessible at the time of the site visit.
- The scope is intended as a general structural condition assessment of the existing building. Detailed structural analysis, load-rating calculations, or verification of the capacity of all existing structural members is not included.
- The review of the overhead crane system is limited to the building structural components supporting the cranes, including accessible runway beams, columns, and associated structural connections. Mechanical/electrical inspection, certification, load testing, or operational/safety inspection of the crane equipment, hoists, trolleys, controls, brakes, or lifting components is excluded – as that service require third party testing company.
- Specialized testing, including ultrasonic testing, weld testing, concrete testing, reinforcement scanning, ground-penetrating radar (GPR), or other non-destructive testing methods, is not included. If such testing is considered necessary based on the site observations, it will be recommended separately.
- Architectural, mechanical, plumbing, electrical, fire protection, environmental, geotechnical, and hazardous-material assessments are excluded from this scope.
- Design and preparation of repair or reinforcement drawings are not included. If structural repairs or modifications are identified as necessary, engineering design and drawings can be provided under a separate scope and fee.
- The assessment does not include review or design of any proposed building additions, expansions, renovations, or changes in occupancy/use.
- Three (3) full days site visit are included. Any additional site visits or investigations requested following issuance of the report will be considered additional services.
- The Client shall provide safe access to the areas to be inspected.

II. SCHEDULE

We anticipate that work will begin immediately following the receipt of a signed agreement or the issuance of a Purchase Order (PO).

Notes:

1. We wish to advise that the flow of critical information required by others must be available to allow completion of our assignment in a timely fashion. Tandem Engineering Group shall

not be responsible for correctness, accuracy or late receipt of information supplied or subsequent errors resulting from such incorrect information.

III. DELIVERABLES

Our understanding of the project deliverables is as follows:

1. As detailed in the scope of work.

IV. FEE BREAKDOWN

Our breakdown of the lump sum fees for detailed design as outlined in the Scope of Work is as follows.

Total Lump Sum..... \$18,800.00

Notes:

- Work to be performed during regular business hours, Monday to Friday and excludes Holidays and Weekends

V. TERMS AND CONDITIONS

1. All prices shown are in USD funds and unless otherwise stated, are payable in such.
2. Sales tax is not included and, where applicable, will be added at time of invoicing.
3. Invoicing shall be submitted *bi-weekly* and payment terms are *Net 30 days* from date on invoice.
4. This proposal is valid for *120 days* from the proposal date.

We appreciate the opportunity to offer our engineering services to the corporation of the **MRA Mobile Experiential**. Tandem Engineering Group has the engineering expertise to provide the best possible service. Please include the Tandem proposal number from the subject line above on correspondence.

Sincerely,

Jaafar El Annan PE, P. Eng., Consulting Engineer
